[Repair Lines Are Non Co Planer Autocad For Mac](#)

---

I already installed everything with brew, and its good, and the service is running too, but does not work in XAMPP, or MAMP or whatever.. Memcache works perfectly in Xampp, but I need to use 'Memcached', because the framework I am using, uses only this, and this way I can upgrade my APP in terms of performance.

Mac install memcache for xampp with homebrew
